

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 6, line 12, as follows:

--Figs. 5a and 5b show a first embodiment of a fan housing in a fan assembly of the present invention. The fan housing 5 includes a main body 51, a first section 52, a second section 53, a fastening structure 54 and a screw 55, wherein the screw 55 has two ends 551, 552. Both the first and second sections 52 and 53 are disposed on the main body 51. The first section 52 has a through hole 521. The fastening structure 54 has a threaded hole. In addition, the fan housing 5 further includes a base 511 for supporting the stator and rotor, and a plurality of ribs or stator blades 55 disposed between the base 511 and the main body 51. The stator blades 55 have shape similar to those of rotor blades 55 of the rotor, and have the same inclined angle.--

Please amend the paragraph beginning on page 6, line 24, as follows:

--In Fig. 5b, a gap G is formed between the first section 52 and the second section 53. The fastening structure 54 is placed in the gap G. When the fan assembly is fixed onto a system frame 56, the screw 55 passes through the hole 561 in the system frame 56 and then passes through the through hole 521 of the first section 51, and finally engages with the threaded hole 541 of the fastening structure 54. The second section 53 prevents the fastening structure 54 from moving along an axial direction of the screw 55, and prevents one end 552 of the screw 55 from being exposed.--
